

The most common dinosaur during the late Jurassic period was the **Allosaurus**. This two-ton predator was thirty-six-feet long and stood sixteen-feet high. It had powerful legs and hands

that had three fingers with six-inch-long claws. Fossils were found in North America, Tanzania, and Australia.

RI.3.2 Determine the main idea of a text; recount the key details and explain how they support the main idea. Also RE.3.4.a, L.3.4.b; RI.4.2, RE.4.4.a, L.4.4.b; RI.5.1, RE.5.4.a, L.5.4.b.
