

HUMAN ORGANS

With a Crayola® colored pencil or marker, draw a line from the word to the correct organ.

BRAIN

The brain is the body's control center. It controls all thinking, feeling, moving, and communicates and is the memory bank. The brain receives, sends, and stores information.

STOMACH

The stomach collects the food that we eat. This is important in the digestion process. The stomach breaks down food into small particles to travel into the intestines.

LUNGS

Lungs help you breathe. The lungs bring oxygen from the air we breathe into the blood, and exhale carbon dioxide.

HEART

The heart pumps blood through our bodies. The heart pumps blood, by contracting and dilating muscles.
