

George Washington Carver
1864-1943

George Washington Carver spent his lifetime being "attentive", and "discovering" with God. First, as a mere child, he discovered nature's secrets by his keen observation, burning curiosity and imaginative questioning.

The day came when he discovered God loved him and he opened the door of his life to Jesus Christ, accepting Him as Savior from sin and finding Him a close companion through life. He discovered the secret of answered prayer by taking Scripture literally in complete faith.

Though his life's work was done in a laboratory behind closed doors, he was a trailblazer just as any foreign missionary or explorer. Dr. Carver could have been the richest man in the world, through patents, but he freely gave his secrets back to mankind.

He died at the age of 80, having been called by Henry Ford "the greatest living scientist." Many of his discoveries provide the foundation for our space-age living.
